Hyperglycemia is where your glucose is too high buy hair detangler & conditioner online in Australia the blood. Meaning your blood sugar is too high. The common symptoms of hyperglycemia or diabetes type one is frequent hunger, frequent urinating, and frequent thirst. You will also experience blurred vision, fatigue, weight loss, your healing power will be low meaning it will take you a long time to heal a wound or cut, dry mouth, dry or itchy skin, and you could have impotence for males.

Your immune system will become weak and you will be able to pick up infection easily. The reason why you are always hungry is because your body can not use glucose as buy hair detangler & conditioner online in Australia energy source. It is also, why you tire out easily. Since the body can not absorb sugar or glucose buy hair detangler & conditioner online in Australia the blood cells you will release it through frequent trips to the bathroom.

Since you make many trips a day to the bathroom, your body realizes that it is losing excess water and thats why you will become thirsty. When it comes to the symptoms, you may experience them all together or it may take some time for your body to go through the process. Most likely though it will be gradual. The changes of developing type one diabetes is 3.

7 to 20 per 100, 000. Over 700,000 Americans have type one diabetes, which adds up to be about ten percent of the total population that has the disorder. It is more common to have type two

diabetes. The reason buy hair detangler & conditioner online in Australia people develop the disorder is because an autoimmune disorder. The body will start to see its own tissue as a foreign object and then it destroys the bodys ability to make insulin.

It has been rumored to be a cause from the mumps, rubella, measles, influenza, polio, or other viruses. Thats why it is very common in young children because those epidemics affect younger children more often than older adults. Diabetes is also genetic. You may simply have the disorder because an immediate family member has it. As for treatment, type one involves injections of insulin. It is absorbed in the blood stream and absorbed by the cells that need insulin and it will then control the levels of sugar in the blood.

You can find more information on [httpwww.all-about-diabetes-symptom.com](http://www.all-about-diabetes-symptom.com) Diabetes is a serious disease that needs to have medical attention as soon as some symptoms begin to surface. The reason why diabetes is serious is because it will cause the body to shut down and you will go into sugar shock. After sugar, shock the body will go into a coma and a person may never come out of the comatose state. Diabetes, in general, can cause the body to stop circulating the buy hair detangler & conditioner online in Australia flow properly and thats why many diabetics have to have parts of their body amputated.

Diabetics also have a higher change of developing kidney, pancreas, and other organ diseases. Type two diabetes will usually affect people much older than that of type one. It is the most common type of diabetes and effects thousands of people each day. It is also referred to as adult onset diabetes. Typically, it is due to being overweight, but there are exceptions to the rule. Type one is where your body lacks insulin and type one is where you body will begin to resist insulin. This type is developed by usually genetics and often is passed down through generations.

The insulin levels with type two diabetics are sometimes normal, but the body wont respond to it. This will create higher blood levels because the body is not using the glucose up. When you have type one you are considered to have symptoms of hyperglycemia, however you will have the opposite reaction with type two and have hypoglycemia.

Hypoglycemia is where you have low blood sugar. It is from the fact buy hair detangler & conditioner online in Australia your body cannot provide enough energy for the activities of the body. It will cause you to be hungry much like type one. It will also make you very nervous or shaky. You will perspire more than the average person and you will become dizzy or light headed.

You will become over anxious or weak which will cause you to have difficulty speaking or feeling restless. You will also become confused and possibly hallucinate.
