AWARDS AND CERTIFICATES:

Canadian Health&Care Mall LTD is licensed online pharmacy, international license number 02724941 issued 10 January 2001

PAYMENT METHODS:

Why does acne happen. - An inflamed spot occurs due to the release of inflammatory fatty acids by a particular bacterium known as p. acnes, which causes the bodys defence systems to respond. buy Lactulose solution online in Australia The plug forms due to an increase in skin cell turnover, increased keratin deposition narrowing the opening of the hair follicle duct, combined with increased sebum production, which mixes with the debris to cause a blockage and a plug to form.

- DHT is formed from testosterone. The chemical reaction naturally happens throughout the body and the conversion of testosterone to DHT is assisted and promoted by the enzyme called 5-alpha reductase. All chemical reactions in the body are controlled and accelerated by enzymes. 1 Stop hormonal fluctuations. This is impossible although people do try by taking plant hormones, HRT and royal jelly. But basically it is best not to mess with our natural hormonal balance. 2 Use Roaccutane. This will affect the conversion of testosterone to DHT, but this will occur all over the body and DHT plays a role in a number of body functions and suppressing it leads to a number of possible side effects.

3 Reduce DHT levels in the hair follicle and in sebaceous gland area only, known as the pilo-sebaceous unit. If it were possible to prevent testosterone from converting to DHT in the acne area of the skin but not stopping this conversion elsewhere in the body could reduce skin sensitisation and the resulting linoleic acid loss, but without buy lactulose solution online in Australia the conversion of

testosterone to DHT in other parts of the body.

This would be great in principle if one can alter the conditions in the pilosebaceous unit for an extended period of time so that DHT levels were reduced locally during the times in our lives when normal hormone levels were out of sync with a topical preparation buy lactulose solution online in Australia lead to a reduction in the triggering of the acne process.

Two products called tri-ethyl citrate and ethyl linoleate which are safe and release citric acid and linoleic acid can change conditions in the skin which slows down the enzyme 5-alpha reductase and hence testosterone conversion to DHT is slowed down locally. The testosterone conversion to DHT will still occur but just somewhere else in the body, meaning other bodily processes buy lactulose solution online in Australia not affected. 4 If one could also replenish linoleic acid levels in the skin then this would lead to a slow down in oil production and skin cell turnover rates and keratin deposition, preventing the buy lactulose solution online in Australia forming and the colonisation by p.

acnes. buy Lactulose solution online in Australia One could take linoleic acid supplements and foods high in linoleic acid. However linoleic acid is used by many buy lactulose solution online in Australia of the body and one would have to take possibly toxic levels to affect skin levels significantly enough through oral supplementation alone. Doing this without going to excess is probably buy lactulose solution online in Australia a good thing and it has been noticed that the Eskimos the Inuit did not suffer from acne buy lactulose solution online in Australia they were introduced to western diets.

However if one can find a way to supplement skin linoleic acid levels using a topical preparation then this would also have an impact on the acne process. 6 Getting linoleic acid into the skin is not easy but you can use special delivery technology using special molecular structures in creams buy lactulose solution online in Australia as Oleosomes and involving techniques with fancy names such as Drysyst technology to help this process. Also if one uses ethyl linoleate, then skin bacteria will help break this down and release linoleic acid into the skin look for products containing ethyl linoleate.

7 One could normalise cell turnover to reduce skin thickening and also reduce keratin increases in skin cells. This would help to prevent blocking of the pilo-sebaceous duct. Retinol A based creams have been shown to normalise skin cell turnover rates. However a potential side effect of retinol products is increased sensitivity to UV and maybe increased skin cancer risk.

So users of retinol based products are advised strongly to use a high SPF sunscreen while using retinol based products. There is a chemical called triethyl citrate which also normalises keratin deposition and skin buy lactulose solution online in Australia turnover rates and without causing photo-sensitivity please search for products containing triethyl citrate.

8 buy Lactulose solution online in Australia oil levels on the skin. This is normally done by using detergents to keep surface oil levels down. Doing this on its own just leads to more oil production and one gets into a downward spiral with a negative feedback loop leading to further increase up regulation of sebum oil production.
