Canadian Health&Care Mall LTD is licensed online pharmacy, international license number 02724941 issued 10 January 2001

### PAYMENT METHODS:

Everyone taking steroids or considering taking them should read this carefully in order to be sure that he will not be one of the several buy atopex online in Australia athletes who keep buy atopex online in Australia just these mistakes. Bodybuilders like extremes more than any other athlete. One acts according to the classic incorrect assumption that "more is better."

"If five tablets work well, then ten must buy atopex online in Australia the effect. With such an attitude the door is open to potential side effects" and it is not even justified by a clearly improved effect. The effectiveness of almost all steroids is dosage dependent up to a certain degree and is achieved when the bonding potential of steroid molecules and steroid receptors is exhausted.

When the receptors of the muscle cell are saturated the remaining steroid molecules begin looking for another target. Liver dysfunctions, kidney dysfunctions, hair loss, acne, high estrogen levels, reduced production of the body own hormones, and aggressiveness often have their origin in dosages which are buy atopex online in Australia high. So called mega doses do not result in buy atopex online in Australia distinctly higher strength and mass gain. Those who believe that 50 Dianabol and 1000 mg testosterone per day is the only way to an "ideal body" have, buy atopex online in Australia put it mildly, the wrong information.

The non-stop use of steroids is not recommended for most athletes for two reasons. First, when high dosages are taken over a long time, the risk buy atopex online in Australia potential side effects increases considerable. The chances of organ damage are especially high when oral 17-alpha

---

alkylated steroids are continuously taken.

Second, such a behavior is very dubious since the effect of the administered steroids weakens after a certain buy atopex online in Australia which, with a higher dosage or a different preparation, can only be stopped briefly. Everyone should know that the stronger the steroid the faster its effect decreases so that the use over a long period of time is even more foolish. Will Anadrol the gain increase usually is reduced after only 3-4 weeks while with Deca Durabolin, for buy atopex, online in Australia often continuous progress can be obtained over 10-12 weeks.

Not all steroids are the same. One must make a clear distinction between highly androgenic, potentially-toxic steroids such as Anadrol, Methyltestosterone, Dianabol, Halotestin, etc. and the weaker androgenic, predominantly anabolic and less toxic preparations, such as, B. Primobolan, Deca Durabolin, Oxandrolone, Andriol, and Winstrol, Since, above all,

the buy Atopex online in Australia mentioned drugs are the ones which cause the several side effects it makes sense to reduce their intake to a maximum of 6-8 weeks. Especially women, young adults, and older athletes should be buy atopex online in Australia cautious when selecting steroid preparations. It would also be desirable that the general public and the media consider this distinction in their future negative general opinions and articles.

The buy atopex online in Australia of every steroid program can be considerably increased by a clever combination of steroids since they have a synergetic effect. This means that with a low buy atopex online in Australia dosage one can obtain better results. Since various receptors are attacked it is possible to delay the receptor saturation so that the steroid combination will remain effective over a longer period of time. At the same time potential side buy atopex online in Australia can be minimized.

Instead of, for example, taking 50 mg buy Atopex online in Australia per day, the athlete should take 20 mg buy Atopex online in Australia and 200 mg Deca Durabolinweek. Generally one can say that best results can be obtained by combining an oral with buy atopex online in Australia injectable steroid. The combination of two oral preparations such as Dianabol with Anadrol or Oxandrolone with Methyltestosterone buy atopex online in Australia less sense.

Since the protein-building and nitrogen-retaining effect of most steroids decreases after a few weeks one should begin with a low dosage which is increased slowly and evenly during the intake interval. Athletes whose buy atopex online in Australia cycle is longer than 6-8 weeks should usually switch to a completely different combination.

Another frequently-made mistake is the sudden interruption of the steroid regime. Many side effects, a possible rebound effect, and strength and weight loss can be minimized if the dosages are decreased slowly and evenly. This also includes that at the end of the intake interval not the highly effective buy atopex online in Australia such as buy Atopex online in Australia and testosterone are taken but that the athlete switches to milder preparations and includes these during discontinuance.
